

Ashraf Hebish

AI & Data Science Student | Data Analytics & Python

Damietta, Egypt | ashrafhebish23@gmail.com | linkedin.com/in/ashraf-hebish-b16370360 | Portfolio | github.com/ashrafhebish

Professional Summary

AI & Data Science student at Horus University in Egypt, with a diploma in AI & Data Science from Arabian Academy (Excellent). Builds practical, data-driven applications in Python and JavaScript, including a linear regression house-price model, a 12-phase statistical analysis pipeline written without external statistics libraries and an interactive numerical methods lab. Holds certifications in Generative AI, Responsible AI, Data Visualization and Prompt Engineering.

Technical Skills

Programming Languages:	Python, JavaScript, HTML, CSS, Java
Data & Analytics:	Data Cleaning, Data Visualization, Descriptive Statistics, Hypothesis Testing, Confidence Intervals, ANOVA, Numerical Methods, CSV Data Processing
Machine Learning:	Simple & Multiple Linear Regression, Model Evaluation (MSE, RMSE, MAE), Residual Analysis
AI:	Generative AI, Encoder-Decoder Architecture, Responsible AI, Prompt Engineering
Tools & Platforms:	Git, GitHub, GitHub Pages, Chart.js, LocalStorage, Microsoft 365 Copilot
Web & Hardware:	Responsive Web Design, UI/UX, Offline Web Apps, Digital Logic Design

Projects

Smart Budget | *Python, JavaScript, HTML, CSS* Live Demo
• Built a monthly budget manager (50/30/20, 60/20/20 or custom ratios) that tracks spending against the plan; ported from Python to an offline JavaScript app with reports and CSV export.

Smart Regression System | *JavaScript, Machine Learning* Live Demo
• Built a house-price prediction app that trains simple or multiple linear regression on a 200-row sample or any uploaded CSV.
• Reports MSE, RMSE and MAE with the regression equation, coefficients, actual-vs-predicted and residual plots, a correlation matrix and new-price predictions.

Numerical Methods Lab | *JavaScript, Chart.js* Live Demo
• Team project (10–12 students): interactive lab for six numerical methods (Bisection, False Position, Newton-Raphson, Secant, Thomas, Jacobi) with live convergence charts and step-by-step mode.
• Presented the project at the Faculty of AI *Best Numerical Methods Calculator* competition, Horus University (May 2026).

Statistical Analysis Pipeline | *Python, JavaScript* Live Demo
• Built a pipeline that auto-detects CSV column types and runs 12 analysis phases, with descriptive statistics, confidence intervals, t-tests and ANOVA implemented by hand in Python (no SciPy).

Digital Logic Security System | *Digital Logic, Hardware*
• Designed and built a logic-gate access-control prototype that compares a 4-bit entered code with a key code using XOR/NOR gates, showing the result on green/red LEDs; wired and tested on a breadboard with a custom wooden enclosure.

Education

Horus University in Egypt <i>B.Sc., Artificial Intelligence & Data Science</i>	<i>2024 – 2028 (Expected)</i>
Arabian Academy <i>Diploma, AI & Data Science</i>	<i>Jul 2026 – Sep 2026</i>

Certifications

• Arabian Academy: Data Science & AI Course (60 hours, Excellent)	2026
• Edraak: AI in the Workplace: Tools and Practical Applications • Data Visualization for Decision-Making	2026
• IBM SkillsBuild: Introduction to Data Concepts • Anthropic: Claude 101	2026
• Mahara-Tech (ITI): Java IO and Network Programming	2026
• Other: What Is Generative AI? • Introduction to Responsible AI • Encoder-Decoder Architecture • One Million Prompts • Microsoft 365 Copilot for Work (2025)
